

Infection Control during Construction, Renovation and Demolition activities

During Project	
1.	Minimise dust at site by housekeeping measures
2.	Steps taken to prevent airborne dust dispersal
3.	Water mist work surfaces to control dust
4.	Seal unused doors and keep doors closed at all times
5.	Block off / Seal air vents
6.	Place dust mat at entrance and exit of work areas. Clean and replace regularly
7.	Remove or isolate ACMV system in areas where work is being performed to prevent contamination of duct system
8.	Critical barriers to seal area from non-work areas
9.	All debris removed from site daily
10.	Contain construction waste before transport in tightly covered containers
11.	Cover transport receptacles or carts
12.	Designated path for entry and exit
13.	Personnel entering work site wear shoe covers and cloth overalls
14.	Shoe covers and cloth overall removed before leaving work area
15.	Direct pedestrian traffic by minimizing patient movement around construction activities
16.	Post signage to direct traffic and construction work in progress
Completion of Project	
1.	Clean work area upon completion of task
2.	Wipe work surfaces with disinfectant
3.	Wet mop or vacuum work area
4.	Remove isolation of ACMV system in area where work is being performed
5.	Replace or wash air con filters
6.	Remove barrier materials carefully to minimise spreading of dirt and debris associated with construction
7.	Wet mop area with disinfectant
