

Seeking participants for research study on:
**Brain & Body Changes in
Early Stage Dementia**

NNI researchers are studying how changes in brain structure, proteins in blood and spinal fluid impact memory and thinking in young and older patients. The findings will help us find better ways to diagnose, treat and prevent dementia.

What the study involves:

- 1 to 3 visits per year (depending on tests conducted) for 5 years
- Tests include (based on pre-specified criteria):
 - PET scans
 - MRI scans
 - Blood tests
 - Spinal tap
 - Eye examination
 - Neuropsychological assessments

You will be reimbursed for your time.

Study Location:

National Neuroscience Institute (TTSH Campus)

Protocol Title:

Neurocognition, Imaging and Biomarker
Longitudinal Study in SingaporE (NIMBLE)

Are you eligible?

Key criteria:

- ✓ Aged 35 to 85 years old
- ✓ Singaporean, PR or foreigner
- ✓ Diagnosed with mild symptoms of forgetfulness but still independent in daily life
- ✓ Healthy participants also recruited

For more details on other screening criteria and to sign up for the study, contact or text the coordinator at
