

Seeking participants to study the gut microbiome

This study is investigating the relationship between the bacteria that reside in our digestive tracts, their metabolites and the levels of inflammation in our bodies.

What the study involves:

- Collection of blood, urine, saliva and stool samples
- Assessment of upper limb coordination and walking speed will be conducted
- One visit only (~45mins) – No follow up required
- Location : National Neuroscience Institute (NNI) @ TTSH

We are actively looking for healthy volunteers who fit into the following criteria :

Who is eligible?

- Men and women aged 21 to 75 years old
- Not on probiotics/prebiotics
- Not pregnant or breastfeeding

For more details and to participate in the study , please contact our research coordinator:

Name: Amelia Aw

Email: amelia_yy_aw@nni.com.sg

Mon to Fri , 8.30am – 6pm

Protocol Title:

Deciphering the relationship between the gut microbiome and metabolome with systemic and neuroinflammation in Multiple Sclerosis, Neuromyelitis Optica Spectrum Disorder and related neuroimmunological disorders
